

LINK Technologies was founded in 2002 on the premise that there was a better way to deliver technology expertise and solutions to the private and public sector. In a very short time it has managed to establish itself at the forefront of ICT in Greece. LINK's main objective is to provide integrated solutions in the Information and Telecommunications sector whilst specialising in Transport Telematics in order to meet the needs of modern companies.

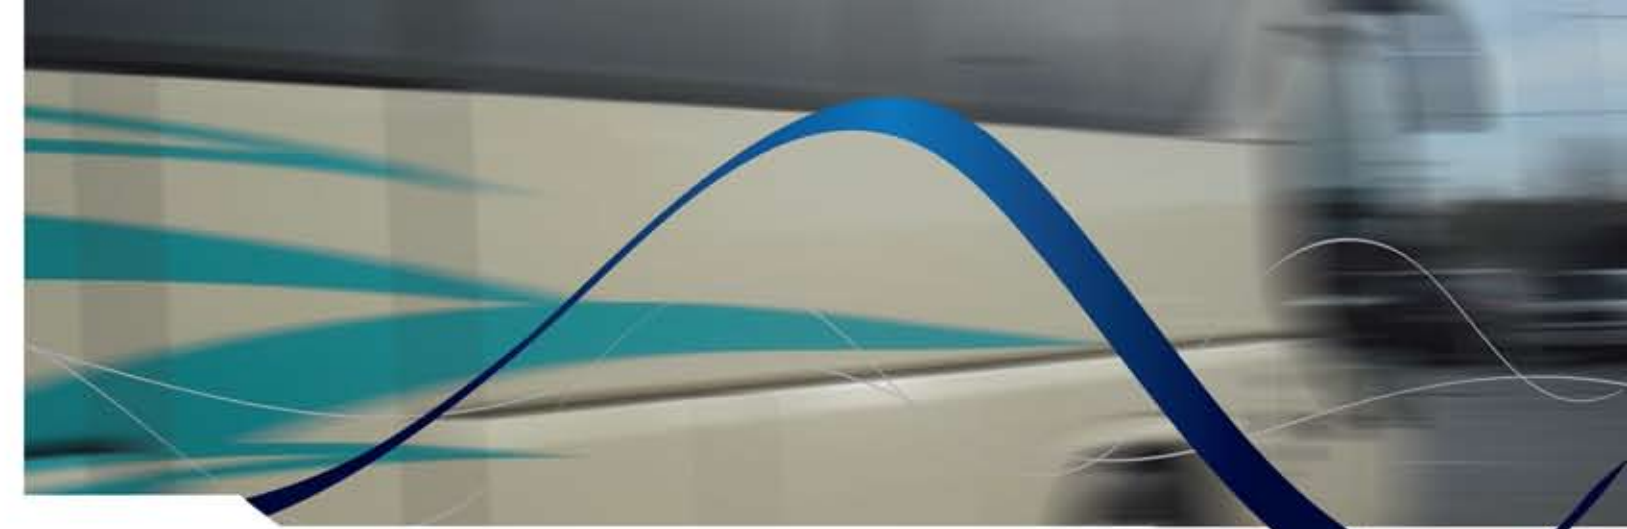

With years of experience researching and developing cutting-edge technology,

LINK is at the forefront of its field, developing products for customers in the areas of transport, telematics and software telemetry, both in the public and private sectors. Ex-amples of LINK's customer base include: public transport organi-sations, municipalities, ambulance fleets and private enterprises such as intercity transport organisations, passenger and cargo ships, heavy-goods transportation companies and many more.

The mandate of LINK Technologies is that it constantly inno-vates, creating real-world solutions using the latest technologi-cal developments, so that it might provide convenient, effective and affordable solutions for its clients. Success in LINK's field demands is that it works faster and more efficiently than compe-tition, proof of which is the constantly increasing market share that the company enjoys. From fleet-management solutions (including both land and sea transportation), to software solutions and even smart-phone based solutions, LINK has developed products to suit your needs.

## Transport Telematics and Ticket Management System

## Our role

Inter-Urban Transport companies (KTEL) carries thousands of passengers on an annual basis, especially during the summer period, significantly contributing to the local tourism. Link Technologies SA successfully designed and implemented on various companies an integrated fleet management solution, which is being used from the company's vehicles.

## Applications

Link Technologies SA provides a wide range of features and services to the Inter-Urban Transport Companies (KTEL).

Our software boasts an impressive array of features setting itself apart as the most reliable and robust fleet management solution in Greece.

More specifically, Link Technologies, can implement the following solutions:

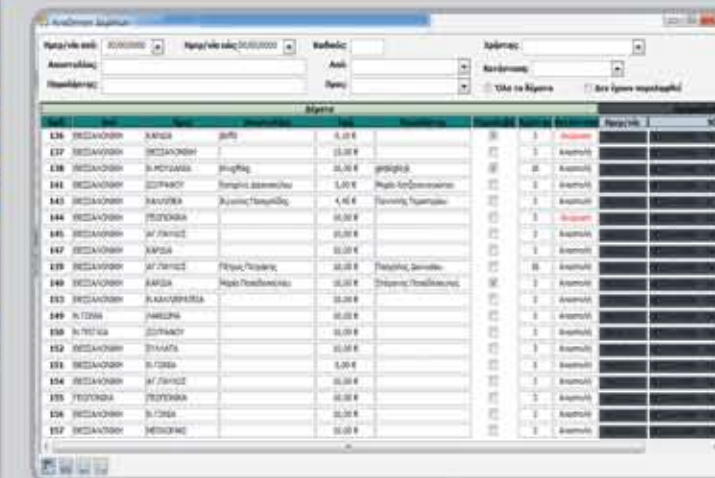

- ▶ Fleet Management Software – Skyview
- ▶ Ticket Editing System

The system includes:

- ✔ Central ticketing database
- ✔ Ticket Editing Software for ticket booths
- ✔ Ticket Editing Software for the drivers
- ✔ Ticket Editing Software for PDA

Departure/Arrival Announcement Software

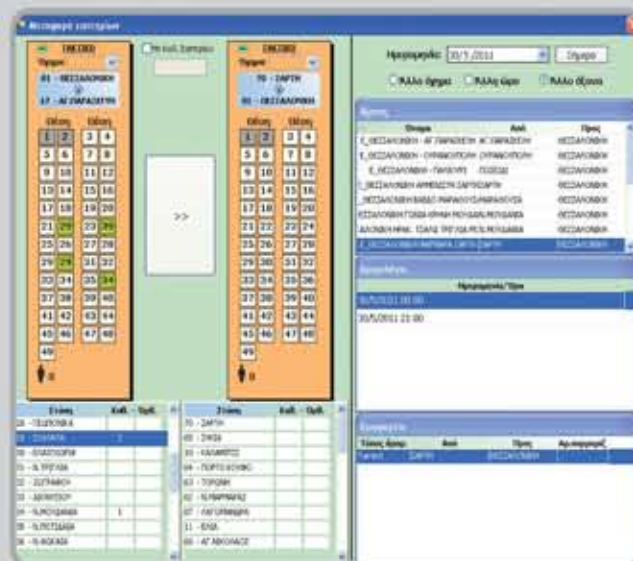

Storage Room Management Software

- ▶ Departure/Arrival Announcement Software

The system collect data in real time, enabling schedules to be displayed live, on monitors.

- ▶ Storage Room Management Software

This specific feature optimizes the management, the delivery and the reception of the packages in the company's storage room. Furthermore, additional features, such as proof of delivery and SMS notifications to the dispatcher, can be integrated into the application.
